

## Indexes Tab

This is the help for the Indexes tab in SQLite Control.

Index List

idx\_PostAcs

SQL Text

```
CREATE INDEX
  idx_PostAcs
ON
  PostAcs
  (ACNAME)
```

Index Name

idx\_PostAcs

Table Names

Accounts

CCInfo

DDM

Filters

PostAcs

Trans

MKEY

ACNAME

ACTYPE

Field Names

False

True

False

The current Indexes being used within the Database are shown in this tab.

The Index List is on the left hand side of the tab.

## Index List

At the bottom of the list are the Plus/Minus buttons associated with the list.

+	-
---	---

Clicking on the Plus icon will add a new Index. Clicking on the Minus button will remove the currently highlighted Index.

Adding an Index will open the add index section as shown below:

Index Name

Table Names

Accounts
CCInfo
DDM
Filters
**PostAcs**
Trans
Variables
sqlite\_sequence

Field Names

MKEY
ACNAME
ACTYPE

☐
☒
☐

False
True
False

Enter a new Index name in the Index Name Field. Then select the table and fields within the table to make the new index.

Save

Clicking on the Save button at the bottom right will create the new index.
