

Triggers Tab

Triggers

Trigger List	SQL Statement
AcctIDChange	CREATE TRIGGER AcctIDChange after UPDATE OF ACCTID on Accounts begin Update Trans Set ACCTID = new.AcctID where ACCTID = old.AcctID; end

This is the help for the Triggers tab.

This tab shows all the Triggers that are registered within the database. You are able to create and delete Triggers from here. This is done by clicking on the Plus/Minus buttons at the bottom of the Trigger List.

Clicking on a Trigger in the Trigger List will display the SQL associated with that trigger on the top right of the window. The bottom right is used when creating a new trigger.

Adding a Trigger

Clicking on the  button will open the New Trigger dialog in the bottom right of the window. An example is shown below:

Create Trigger

CREATE TRIGGER	n/a	NEWTRIGGER
BEFORE		DELETE
ON	Accounts	n/a
BEGIN		
<div></div>		
END		

Cancel Save

A full discussion on this area is in the help topic **Adding a Trigger**.
